The new HDC-Keypad offers a fresh look along with an internal design and functionality that addresses several keyless access issues. The HDC-Keypad is designed with onboard relays capable of directly power-locking the actuators and door it is installed on. This reduces installation time while creating a more foolproof installation.

HDC-Keypad communicates with all desired remotes and triggers including HDC's unique Flex Switch™ remote. Additional wireless keypad entries, and of course, custom or standard fobs can be used.

A unique feature MP offers is a night light output. Touching the keypad or pressing the fob will activate lights on the entry pad and light output (see illustrations).

Other features include a door bell ring and the ability to control any number of doors or compartments.

Downloadable and viewable end-user instructional videos are available on our website:
